TITLE

TM8955 Electrical Characteristics

APPLICATION NOTE

The electrical characteristics described in the document are for reference only. The operating current is measured at room temperature (25°C) and there are two types of test data: no load and LCD load only. All the characteristics will be different subject to the process variation, temperature, Option, loading and operating voltage etc. IC from different lots will be slightly different due to the drift of the manufacturing processes.

1. Power Consumption with LCD Load

LCD: 1/3Bias, 1/4Duty * 9 Seg, Size: 1cm * 2.5cm

At 3V, 25°C (With LCD Load)

NOTE 1:

Freq. Tolerance indicates that after trimming the capacitance of external capacitor of 32.768 kHz Crystal oscillator, the daily time offset of the real time clock function differs with the real time.

Many factors will affect the driving capability of the Driver of the Crystal circuit, such as the setting of BCF flag in MCU, the manufactures /lot No ./type of Crystal oscillator, PCB layout and quality of external capacitor.

NOTE 2:

Set BCF flag = 1 before using Internal 500 KHz and 250 KHz to assure that IC can work properly with a higher driving capability.
