TM89P51M Electrical Characteristics

APPLICATION NOTE

The data in this document are for reference only. The electric current consumption test data are tested under without loading condition, and all data are also tested in room temperature (25°C). All the characteristics will be different subject to the process variation, temperature, option, loading and operating voltage etc... IC from different lots will be slightly different due to the drift of the manufacturing processes.

1. Power Consumption without LCD Loading**At 3V, 25°C (Without LCD Loading)**

TM89P51M (32K Crystal and Internal Fast 500 KHz 3V)

NOTE 1:

Freq. Tolerance indicates after trimming the capacitance of external capacitor of 32.768 KHz Crystal oscillator, the daily time offset of the real time clock function differs with the actual time.

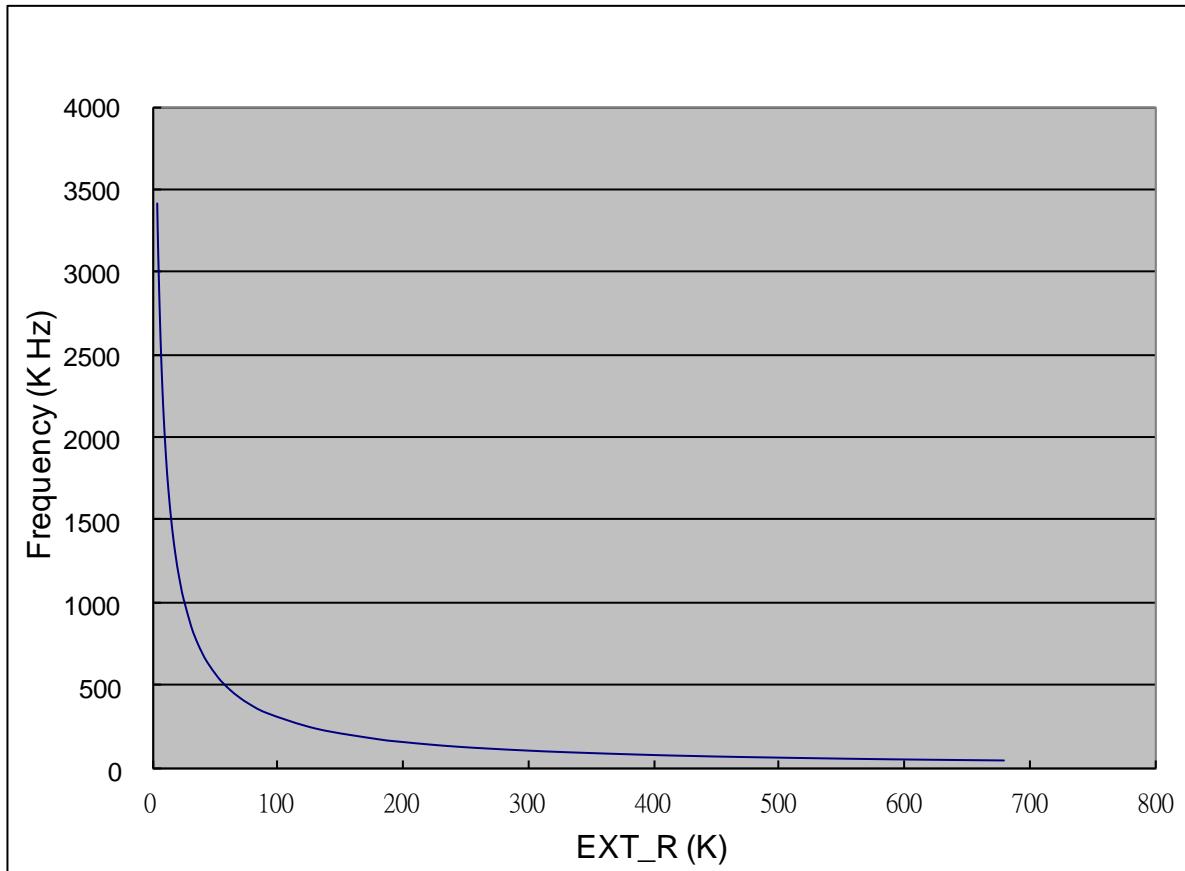

Many factors will affect the driving capability of the Driver of the Crystal circuit, such as the setting of BCF flag in MCU, the manufactures, lot No., type of Crystal oscillator, PCB layout and quality of external capacitor.

NOTE 2:

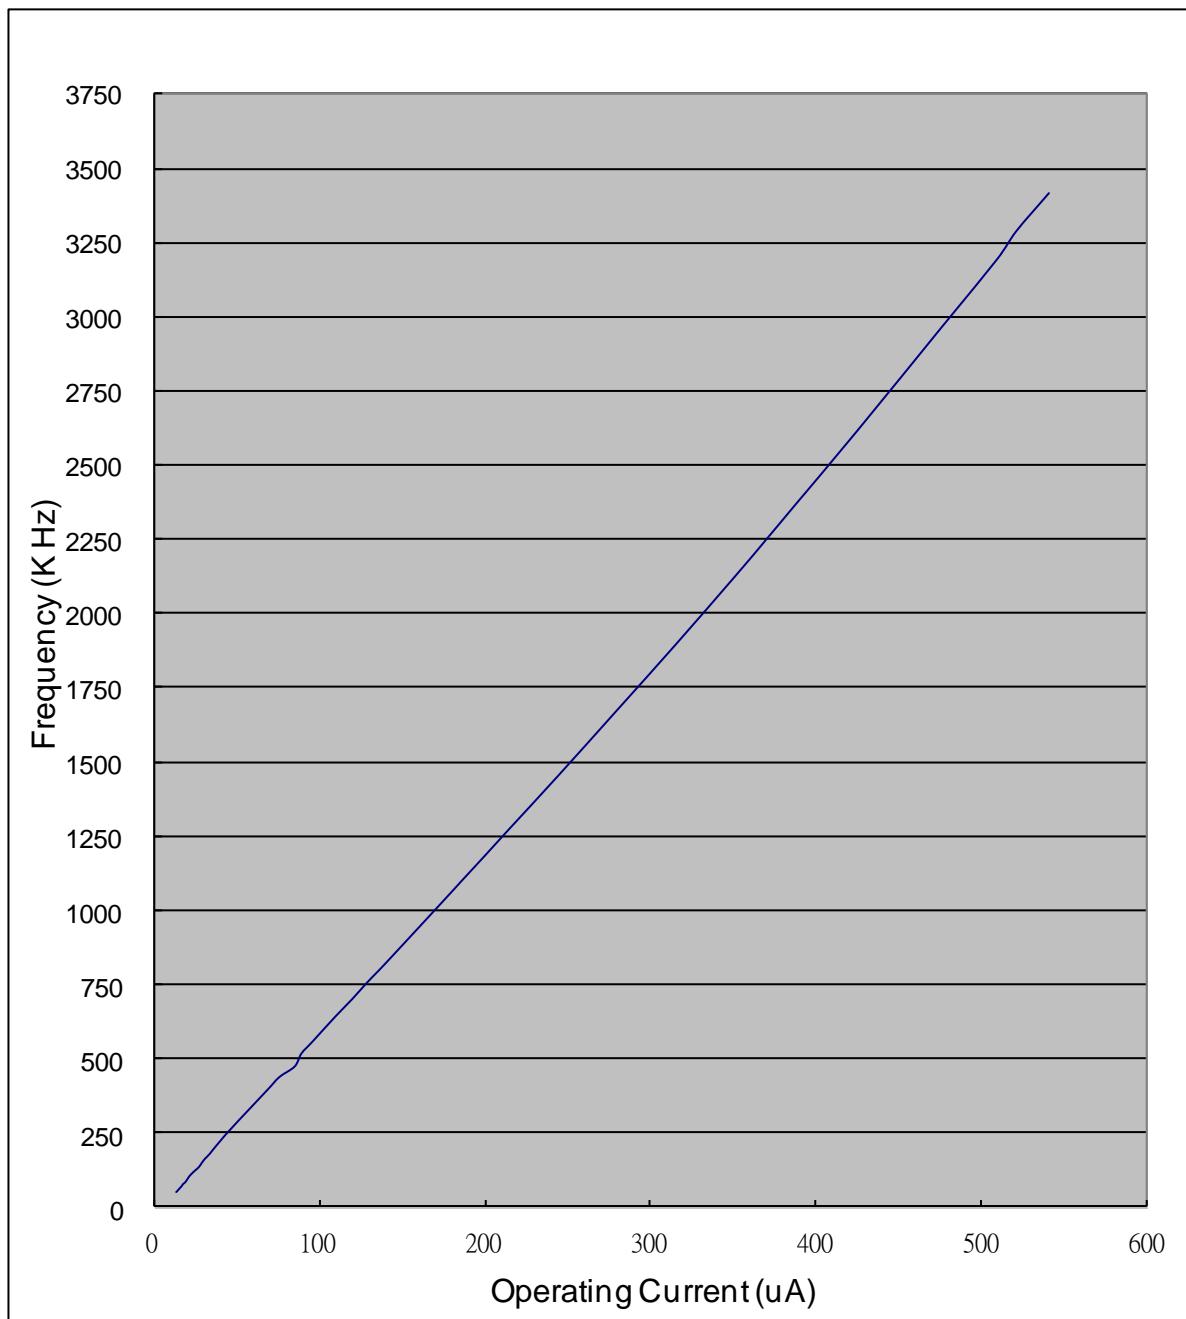

Set BCF flag = 1 before using Internal 500 KHz and 250 KHz to assure that IC can work properly with a higher driving capability.
